Organization Handoff Guide

Use this guide when you need to describe **parties, departments, teams, and ownership**.

This guide is about **who is responsible**, **how groups are arranged**, and **who owns what**.

KNOWLEDGE AREA

This guide helps with **teams, ownership, and responsibilities**.

Guide family map

Where this guide sits in the full Blueprint Handoff Atlas family.

ROOT & CROSS-CUTTING

Handoff Atlas | Blueprint Bundle | Metamodel Vocabulary | Migrations

DESIGN

Architecture | Concepts | Domain | Dynamics | Infrastructure | Interactions | Models | Quality | Rules | Story

GOVERNANCE

Capability | Decisions | Motivation | **Organization** | Roadmap | Leverage | Test Cases | Value Stream

Capture → focus → transformation

What to gather first, what this layer focuses on, and what a modeler or AI agent can produce from it.

Main entities in this guide

- **Party** - the highest-level organizational owner in this guide.
- **Department** - a subdivision inside a party.
- **Team** - the working group that owns or delivers a slice of responsibility.
    - Often confused with: **Party** in the Architecture guide. Organization is about ownership structure; Architecture is about structural system boundaries.

What belongs here

- companies, business units, or system-owning parties
- departments
- teams
- ownership relationships

What does not belong here

- capability maps
- process flows
- technical architecture details unless they clarify ownership

Core things to capture

- what parties exist
- what departments exist under them
- what teams exist under them
- what each group is responsible for
- what important ownership boundaries matter

Core relationships to capture

- party -> department
- party -> team
- team -> owned area/artifact/capability
- department -> grouped teams

Modus operandi

Describe organization for accountability:

1. identify the top-level parties
2. identify departments and teams
3. describe responsibility boundaries
4. connect ownership to system or business areas

Prompt set

- who owns this domain or system?
- what groups exist?
- what is each group responsible for?
- where does accountability change hands?

Free-text intake template

- **Party name:**
- **Departments:**
- **Teams:**
- **Responsibility summary:**
- **Owned areas/artifacts:**

Worked example

- Commerce Operations party includes Returns Policy department and Storefront Experience team
- Storefront Experience team owns the return request workflow and customer account experience

Layer-specific handoff guidance

For organization, the handoff should make **accountability** easy to trace.

The receiver should quickly understand:

- what parties, departments, and teams exist
- what each one owns
- where responsibility changes hands

If ownership is fuzzy or implied, the handoff is not yet strong enough.

How this becomes YAML

A technical modeler or AI agent can transform this into party, department, and team structures plus ownership references elsewhere in the Blueprint.

Common mistakes

- listing job titles instead of real responsible groups
- omitting ownership boundaries
- mixing temporary project groups with stable organizational ownership
